

Hemilead[®]

By SMDW

**The most powerful
unilateral control
stick for
hemiplegic people !**

Hemilead[®]

**To enhance the mobility for hemiplegic people,
SMDW developed Hemilead, the unilateral control
stick with double effect.**

THE DOUBLE EFFECT

More efficient and better performing

The double effect:

- ✓ Forward as well as backward arm movements propel the wheelchair for optimal efficiency

Simplified control:

- ✓ Moving forwards and backwards, slowing down and turning can be done by using only one hand

Reliable system:

- ✓ Just one hydraulic handle for braking and reversing

The amplitude:

- ✓ System allows for arm movements with variable amplitude or constant intensity, which is perfect for people that are physically weak or have a low capacity for movement

More comfort and manoeuvrability

Same size :

- ✓ The adapted wheelchair is still as narrow and easy to fold as before

Convenience:

- ✓ Possibility of assembly with small or large wheels
- ✓ Very short turning radius

Comfort:

- ✓ Optimal driving position
- ✓ Easily adaptable speed and intensity
- ✓ Aesthetic and discrete
- ✓ Available for most models (just ask)

Hemilead will replace the double ring system which is difficult to handle as well as the not very ergonomic lowered base.

This system conforms to EC regulations and had been tested and approved by the French CERAH (Centre d'Etudes et de Recherche sur l'Appareillage des Handicapés)
